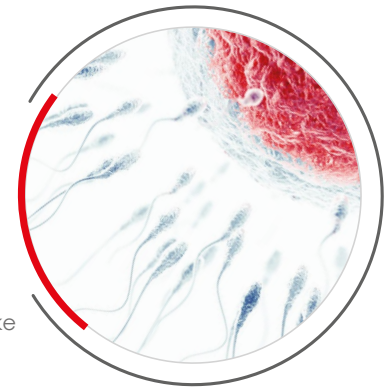
Swine reproduction technologies

imv TECHNOLOGIES

IMV TECHNOLOGIES. FOR LIFE.



INNOVATION. FOR LIFE.

In 1963, Robert Cassou founded IMV Technologies and set the standard for semen storage and insemination with the revolutionary «French Straw».

Since then, we've approached every new solution with the same innovative spirit as he did.

Today, we are still leaders in applied and disruptive technologies. We not only make things; we also improve things that already exist.

TECHNOLOGY. FOR LIFE.

Curiosity is one of our main drivers. We're never satisfied with the status quo. From semen collection to wireless ultrasound, this philosophy is why our technology is accepted and relied upon around the world.

Beyond technology, we create state-of-the-art techniques and programs to support its implementation.

SUSTAINABILITY. FOR LIFE.

Life is nothing without the planet we call home. That's why in everything we do, we push to implement sustainable practices that minimize our carbon footprint. It's not just our stated corporate responsibility. It is our life.

We challenge ourselves with new thinking that drives toward sustainable food sources for future generations. Through the use of our technologies, we believe land resources can be more efficiently managed and agriculture can become more sustainable. We aim to preserve Earth's abundance and beauty.

We have a genuine desire to make a positive impact.

REPRODUCTION. FOR LIFE.

For over 60 years, we've been at the leading edge of artificial insemination technology.

Over time, we've evolved to become more than an artificial insemination company. Our reproductive biotechnologies, which have become the standard across the globe, touch every aspect of reproduction, including collecting gametes, confirming pregnancy and managing data.

With an exponentially growing population, abundant and sustainable food sources are critical. Our technologies make this possible. This notion is a driving force behind IMV Technologies.

Swine reproduction technologies

IMV Technologies designs and manufactures innovative consumables and equipment for swine insemination.

We are able to provide our customers with a range of products for swine insemination with both fresh and frozen semen. Through the use of our equipments, we aim to improve semen processing and insemination, thereby boosting conception results, while having the utmost traceability and safety for the animal.

Discover our complete range of products: from boar semen collection to sow insemination, designed for semen production centers, AI technicians, veterinarians, and swine farmers.

ExaPad Mini

With its innovative design and exceptional image quality, the ExaPad Mini allows you to scan accurately for a variety of applications. The ExaPad Mini is integrated with various software applications and probes, allowing you to perform fertility work in sows as well as IMF and testicular scanning in boars.

Key benefits

- Excellent image quality
- Software integration with Biotronics and Ecotext for meat science and testicular scanning
- Touch screen

Applications

- Abdominal
- Reproduction
- Backfat and Loin muscle measurements
- Testicular scanning

Reference

90-2440KIT - ExaPad Mini veterinary ultrasound scanner

Related features

Teamviewer: Equipped with Teamviewer to allow for remote support on the device. Allowing you to have access to technical and clinical experts should you have any difficulty whilst imaging

Probe compatibility

	Product
	LR760V - Linear Rectal
	CRV460V - Curved rectal probe
	L738V- Linear Tendon
	C360S - Convex
	L3180B2 - Swine Backfat
	C614P - Micro-convex probe
	P320R - Phased array probe
	P713R - Phased array probe

Specifications

	ExaPad Mini
Probe connectors	1
Screen size	12 inches
Battery life	90 mins
Optional external charger	No
Optional stand	No
Weight	4kg
Height	250mm
Width	320mm
Depth	58mm
Colour Doppler	Yes
Software integration	Biotronics, Ecotext,Meat Q text

ImaGo range

On the go reproduction focus ImaGo range is made for multiple species in mind, including swine. ImaGo's rugged, portable design and good image quality ensures you're always ready for high-quality care, when using the scanner for multiple applications in swine.

Key benefits

ImaGo L&C

- Presets for different species to ensure a quick start
- Lightweight and small -1.18 kg
- Interchangeable 4 hours battery
- Ensures biosecurity as it can be washed in the bucket of water and submerged (IP67 standard)

ImaGo Flex

- Presets for different species to ensure a quick start
- Lightweight and small -1.5 kg
- Interchangeable 4 hours battery
- 7 probes can be connected

Applications

- Fertility
- Abdominal
- Backfat and Loin muscle measurements
- Pregnancy detection from 18 days

Resets	More than 15	More than 47
Waterproofness	IP 67	IP32
Warranty	2 years	2 years

Easi-Scan:Go Lite

Take your swine breeding program to the next level with the Easi-Scan: Go Lite — the tough, wireless scanner built for fast, accurate results. Designed for easy use in any environment, it delivers clear images starting as early as 18 days pregnancy. Lightweight, durable and portable, the Go Lite helps you make faster decisions, improve breeding success, and boost your profits — all with the freedom of a wire-free design.

Key benefits

- Excellent image quality for pregnancy detection from 18 days
- Automatic backfat measurement
- Waterproof for easy cleaning and biosecurity
- Up to 5 hours of battery life

Reference

ESG-LITE-SCANNER-C

Probe	Sealed,cruve, 128 elements
Charger	Stand-alone charger, can be used in the car
Battery life	Up to 5 hours
Waterproofness	IP 67, waterproof
Viewing device	Smartphone, Tablet, VGA goggles
Dimensions	19 x 8.3 x 6.2 cm
Weight	850g
Warranty	2 years

Eco Sensitive gloves

This polyethylene glove is the most cost-effective veterinary glove.

It is suitable for ultrasounds exams

Thickness 27µ

Red color

Resistance *** Sensitivity *** Odor protection **

Reference

024187 - Eco Sensitive gloves

Overboot

Polyethylene overboots with 43x53 cm double elastics for heavy-duty use.

Easy to put on and excellent grip.

eSmile

A user-friendly laboratory management software which links all aspects of semen traceabilty and semen processing.

Key benefits

- Full traceability of male production
- Enhances productivity levels
- Multisite connectivity with automatic synchronization
- Fully automated data upload to minimize human entry
- Versatile Microsoft R SQL-based database
- Simplified in-house report management
- Generation of barcodes labels during each step of production
- Connectivity of all laboratory equipment and peripherals to eSmile
- Optional veterinary module: Veterinary task and history / Follow-up and reminder

Collectis

The heart of the Collectis system is the artificial vagina operated by an electro-pneumatic system with a pulsating mode that replicates uterine stimulation.

Key benefits

- Improved productivity: one technician can collect from up to 4 boars at the same time
- Improved semen quality: insulated vagina creates ideal hygienic collection
- Safer working conditions: risk of injury reduced with less bending and kneeling
- Easier management: lower turnover rate with production staff
- Easier configuration: Collectis can adjust to existing barn layout

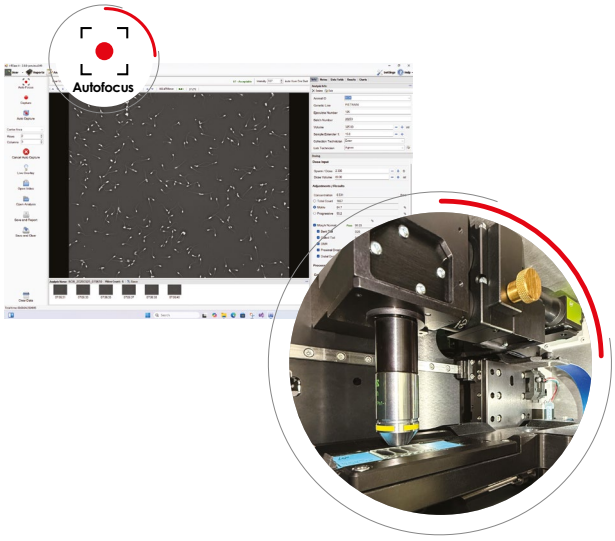
006452 - Mini pipette for semen sampling

Key benefits

With IVOS Pro, streamline your operations by achieving maximum doses and quality through data accuracy and standardization powered by automation. You will significantly speed up your workflow and gain the valuable insights to optimize your stud management.



Maximize doses & ensure quality

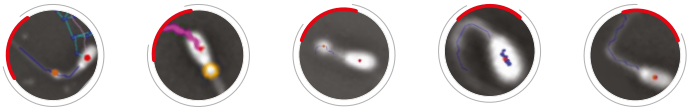
- Standardize semen analysis with autofocus, auto-illumination, and auto-brightness features
- Maximize economic gains through fertility and dose optimization

Workflow speed up

- Unmatched speed and workflow efficiency with minimal clicks, maximum automation, rapid stage movement and more sperm per field
- Reliability and minimal downtime thanks to fixed, locked and standardized optics features
- System integration with auto data transfer, reducing human error and saving time for increased efficiency

Optimize your stud management with data-driven insights

- Abnormality detection of spermatogenesis issues (as Indicators of Male Fertility Health) for better sperm quality
- Quick identification of health issues, heat stress, testicular degeneration problems, preventing compromised ejaculate from entering production and causing economic losses.

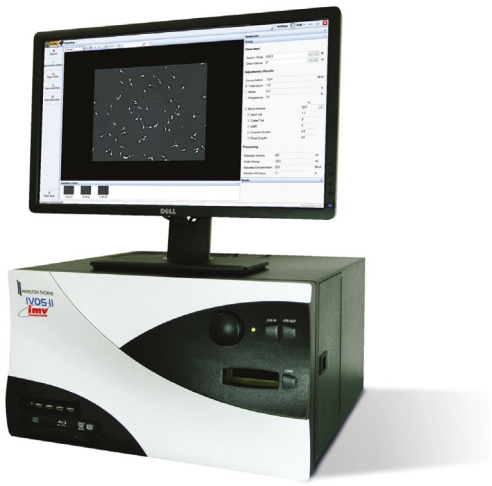


Distal droplets | Proximal droplets | Retroverted tails (DMR) | Coiled tails | Bent tails

- Enhance data monitoring and efficiency with continuous, real-time monitoring of semen morphology quality
- Advanced abnormality analysis on different populations for higher accurate semen quality assessment

IVOS II Ident

IVOS II Ident is an integrated system with fluorescence for animal semen analysis, for both dose production and quality control evaluation.



Key benefits

Quick and ease of use:

- «All-in-one» enclosed system
- Standardized procedures thanks to Leja slides
- Powerful and intuitive - highly configurable, automated heating stage
- Real-time data updating
- Fluorescence

Optimizes productivity and dose quality:

- Optimization of number of doses produced
- Automated morphology analyses
- Decision aid tool
- Data management and traceability
- Fluorescent capabilities

Dilutor - Microlab 600

Tool developed especially for accurate measurement of the concentration of ejaculates.

Reference

023725 - Swine dilutor

Key benefits

- Enhanced accuracy & precision: Customized Hamilton dilutor ensures ±1% accuracy and ±0.2% precision
- Optimized semen preparation: Improves sample consistency for more reliable semen analysis
- Proven superiority: Comparative analysis shows the dilutor outperforms pipettes in accuracy and repeatability
- Dedicated hardware & protocols: Specifically designed for semen sample preparation with multiple protocols
- Multilingual software: Available in English, Français, Italiano, Português, Español, Deutsch...
- Versatile use: Adaptable for various animal species

NEW

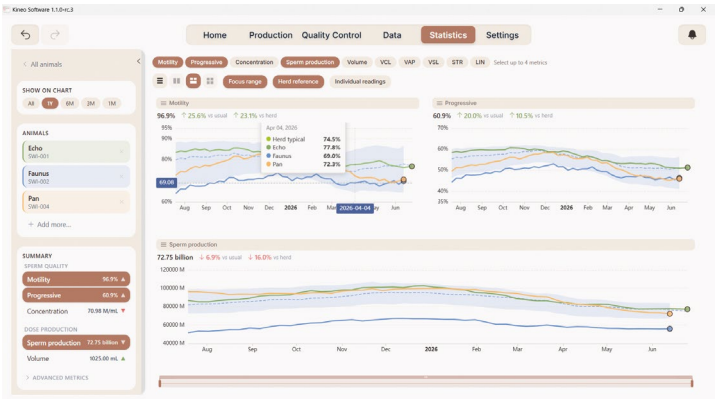
Kineo Start

Kineo Start is a compact semen analyzer designed for simplicity.

Kineo Start is a versatile solution **for both semen dose production and quality control:** Kineo Start supports processing decisions during **production** and **ensures dose quality before insemination.**

Key benefits

- Simple analysis process
- AI-powered imaging innovation
- Focus-free imaging
- Auto-light adjustment
- Manual heated stage
- Customable report



Results:

- Concentration
- Motility
- Progressive

Calculation:

- Number of doses
- Extender volume

Data:

- Statistics
- Sire database

AccuCell photometer

Photometer developed specifically for accurate measurement of ejaculate concentration.

Several modes:

- concentration
- concentration, calculation of the volume of media and the number of doses
- quality control with filter standards

References

023728 - ACCUCELL porcine photometer with dilutor and printer
014434 - ACCUCELL porcine photometer

Key benefits

- Absorbance measurement
- Concentration measurement using an algorithm developed by IMV Technologies and specific for each species
- Display of the volume of media, which needs to be added and the number of doses to be produced

Accessories

006452 - Mini pipette for semen sampling
028515 - Paper roll for photometers (per 10)
021776 - P2 pipette (0,2 to 2µl)
021777 - Tips for P2 pipette

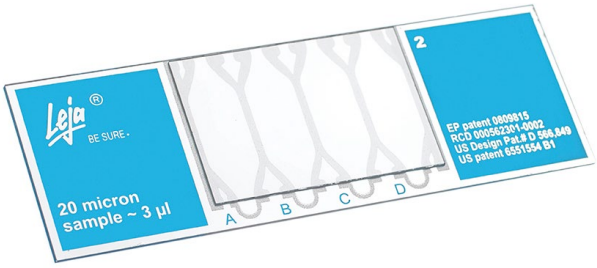
Leja slide

Leja slides are the most accurate fixed-depth slides on the market. Leja calibrated slides provide the accuracy and precision needed to reliably analyze semen. Leja slides facilitate analyses standardization.



Key benefits

- Ensure fixed-depth chambers: availability of a Certificate of Analysis for each batch number
- High-tech materials and rigorous industrial processes: control of the raw materials used and best process used to ensure reliable analyses
- Reliability: controlled filling of chambers
- Accuracy and reliability of semen analyses
- Standardization of analyses
- Repeatable and objective measures
- Inspection and tracking of raw materials, toxicity checks, depth checks, 18-point visual inspection
- Easy-to-use slides

PRIMXcell Ultra

References

028242 - PRIMXcell Ultra 1L (sold by 100)
028243 - PRIMXcell Ultra 5L (sold by 40)
028244 - PRIMXcell Ultra 50L (sold by 4)
028245 - PRIMXcell Ultra 100L (sold by 30)

Key benefits

- PRIMXcell Ultra, with an optimized formulation, offers remarkable efficiency in energy production
- Tests show excellent results in the protection of the spermatozoa's various functions: motility, viability, and the integrity of sperm organelles including the mitochondria and the acrosome.
- The PRIMXcell Ultra formula is anhydrous, meaning that it no longer contains any water molecules
  It has the best stability, which optimizes the powder's storage.
  The particle size of the various components has been studied in depth to make it easier for the powder to dissolve when preparing the media

Accessories

019757 - Sterile water for technical use

NUTRIXcell Ultra

References

028030 - NUTRIXcell Ultra 1 L (per 100)
028029 - NUTRIXcell Ultra 5 L (per 40)
028027 - NUTRIXcell Ultra 50 L (per 4)
028028 - NUTRIXcell Ultra 100 L (per 30)

Key benefits

- NUTRIXcell Ultra contains BioActivator Ultra molecule which stimulates energy production within the mitochondria
- BioActivator Ultra protects also spermatozoa against stress and thermal shock.

  - Regardless of precautions taken during transfer, semen is never safe from thermal shock that may cause damage to spermatozoa. NUTRIXcell Ultra protects spermatozoa from stress and maintains the quality of the semen even after thermal stress.

  - The results of the short hypoosmotic swelling test (sHOST) on day 7 show that NUTRIXcell Ultra maintains the integrity of the plasma membrane, allowing it to resist stress and carry out exchanges for several days with the medium where it gets energy.

Accessories

019757 - Sterile water for technical use

NUTRIXcell Ultra STREAM

Key benefits

A new formula of NUTRIXcell Ultra, designed to reduce agglutination, allowing a better observation of sperm movement under the microscope.

- Low aglutination level
- Better preservation of sperm motility until 14 days
- Excellent fertility performance proved by trials

References

030176 - NUTRIXCELL Ultra STREAM 1 L
029937 - NUTRIXCELL Ultra STREAM 5 L
029936 - NUTRIXCELL Ultra STREAM 50 L

Accessories

019757 - Sterile water for technical use

TRIXcell Ultra

TRIXcell Ultra is designed for high-value semen which must retain its quality whatever the conditions, TRIXcell Ultra features all the technological advances developed by IMV Technologies. Bioactivator Ultra and Bioshield optimise TRIXcell Ultra's performance.

Key benefits

TRIXcell Ultra is the only media formulated to enhance:

- Semen doses produced using a time-saving «two-step» dilution method
- Doses of variable sperm concentration and/or volume; and
- Doses exposed to potentially variable temperatures before use

References

028387 TRIXcell Ultra 1L (x 100)

Accessories

019757 - Sterile water for technical use

Sterile water for technical use

Reference

019757 - Sterile water

Key benefits

- This water is ideal for media preparation or for rinsing laboratory equipment
- Complies with the NF EN ISO 3696 Type 3 standard
- Complies with the monograph on purified water packaged in a container from the current European Pharmacopoeia
- Complies with the «Sterile Purified Water» monograph from the current United States Pharmacopoeia
- Packaged in one-liter bottles

SAFEcell READY-TO-USE

References

028593 - SAFEcell READY-TO-USE 1 liter without antibiotics
029430 - SAFEcell READY-TO-USE 1 liter with antibiotics

Key benefits

- SAFEcell is a ready-to-use, long-term media made from quality ingredients
- Available in two formats , with and without antibiotics

Accessories

019757 - Sterile water for technical use

Stainless steel hot air sterillizer

Stainless steel sterilizer: 30C° to 220C°.

References

024931 - 53 l stainless steel sterilizer 220°C internal dimensions 400*400*330
005732 - 108 L stainless steel sterilizer 220°C internal dimensions 560*480*400
005736 - 256 L stainless steel sterilizer 220°C internal dimensions 800*640*500

Key benefits

- Sterilizes laboratory instruments and containers by destroying highly resistant microorganisms.
- The Memmert C hot air sterilizer features a SetpointWAIT function, that ensures that the program continues only when the setpoint temperature is reached. The precise maintenance of the sterilization time and the complete killing off of highly resistant microorganisms are guaranteed at all times, irrespective of the sterilization load and the stainless steel chamber volume.

Stainless steel incubator 30-70°C

Incubator made of high quality stainless steel, to keep all the instruments used during the collection phase at the right temperature.

GTB 1000 V3 ULTRA

The GTB 1000 V3 ULTRA is reliable and precise swine semen filling machine. Its preventive after-sales service and tailored training minimize downtime risk, ensuring peace of mind.

The antibacterial shell enhances semen production safety, while RFID technology ensures traceability for informed decisions.

Key benefits

- Enhances semen production safety
- Reliable and precise production
- Reduces downtime
- Antibacterial shell
- Sensors and automatic weight control
- RFID Technology
- Preventive after-sales service

GTB 500

The GTB 500 is an automatic filling and sealing machine for porcine semen doses.

Designed to reduce dependency on operator skills and to make your processes more resilient to staff changes, the GTB 500 brings automation within everyone's reach.

The GTB 500 is a CE & EMC-certified solution built to last and supported worldwide by IMV Technologies' 60 years of global expertise.

Key benefits

- Guaranteed speed, precision, and reliability to help your lab increase productivity & quality
- Easy start : plug and play, simple use
- Effortless care with minimum cleaning and maintenance
- Certified safety, build to last with the highest standards (CE and EMC)

Accessories

021060 - Pusher for GoldenFix

GoldenFix

Ready-to-use swine catheter for the auto-insemination of sows and gilts.

Unique all-in-one AI concept.

Key benefits

- Patented head: top of the art for cervix locking
- Flexible flange: specific design with soft components to avoid backflow and be atraumatic
- No more time wasted holding the bag and the tube or bottle: semen packed directly inside the catheter (up to 85ml per dose)
- Auto insemination: insemination process activated by sow body temperature:
  - significant time saving
  - less risk of injuries

BactiBag

BactiBag is IMV Technologies' latest innovation in swine semen packaging. BactiBag is an alternative or a complement to antimicrobial use in the control of bacterial contamination of semen.

Key benefits

- Protects Sperm Quality & Fertility: Reduces bacteria in boar semen, which can harm sperm and lower reproductive performance
- Prevents Bacterial Competition: Limits nutrient depletion and toxin release that negatively impact spermatozoa
- Innovative Antibacterial Technology: Made with BactiGuard, which disrupts bacterial membranes and inhibits multiplication
- Enhances Antibiotic Effectiveness: Increases bacterial membrane permeability, potentially improving the action of some Gram (-) antibiotics
- Part of a Comprehensive Solution: Works alongside Collectis (automated semen collection) and IMV Technologies semen extenders to fight bacterial contamination
- Compatible with IMV Technologies Equipment: Designed for GTB 1000 V3 and GTB 250 machines
- Versatile Use: Suitable for cervical and post-cervical insemination

GTB Bag for GTB 250

Reference

021595 - GTB bag for GTB 250

Key benefits

- Compact and practical: long shelf life, easy opening, more hygienic since the tip is protected until the dose is used
- Universal: compatible with most catheters
- Improved insemination: 2 layers of film with protective and non-spermicidal properties
- It is not necessary to squeeze the bag for conventional insemination
- Customization: colored tips, your logo

GTB Bag Ultra

Reference

029708 - GTB bag ULTRA - 1000

Key benefits

- Safe, guaranteed non-spermicidal multilayer film technology
- In vitro quality controls to meet highest safety standards
- Easy opening, more hygienic since the tip is protected until the dose is used
- Unique traceability system for even greater safety
- User-friendly for easier insemination process
- Customization with premium printing for own branding

Mini GTB Bag Ultra

Reference

Related products

022267 - GTB 250
030144 - GTB1000 V3 ULTRA

Key benefits

- Designed specifically for post cervical artificial insemination
- Compatible with GTB 1000 automatic filling and sealing machine and GTB 250 manual filling and sealing system
- Compact
- Rolls of bags occupy less space in storage than other semen dose packaging solutions
- Doses occupy less space for transfer and/or storage than tubes or bottles
- Practical and easy to open
- Secure
- Protected tip stays clean until moment of use
- Easy to differentiate from conventional doses
- Universal: compatible with most post cervical catheters with connectors
- Comfortable design allows user to control speed of insemination

Contact-O-Max

Contact-O-Max is a remote-controlled, articulated boar cart designed to optimize sow fertility by ensuring sustained and precise snout-to-snout contact with the boar.

This rigorous, precise, and reliable heat detection system maximizes stimulation, achieving fertility rates of up to 95%, while reducing heat returns and late cycles.

Key benefits

- High maneuverability: The articulated boar cart can turn even in the tightest corners. No barn modifications required.
- Quick return on investment : improving your farrowing rates by up to 10% allows you to make your money back in less than 6 months
- Approved and trusted : Thousands of satisfied customers around the world since 1999.

DeepGoldenPig - DeepGoldeGilt

Combined cervical and intrauterine catheter for precise semen deposition beyond the cervix.

Soft foam head for improved lock in the cervix, efficient stimulation, and to prevent backflow.

Two tailored head designs: Optimal fit for sows and enhanced animal comfort with a smaller design for gilts.

Optimized inner catheter: smooth, kink-free design for easy cervical passage.

References

029802 - DeepGoldenPig per 1
029804 - DeepGoldenPig per 25
029809 - DeepGoldenGilt per 1
029803 - DeepGoldenGilt per 25

Key benefits

- When IMV Technologies introduced the Deep Goldenpig in the late 1990's, we knew we were on the right track to help take the market to new heights of efficiency
- The shape, diameter and texture of the foam tip make the Goldenpig ideal for both sows and gilts. The unique design of the Goldenpig foam tip decreases semen backflow without inhibiting uterine contractions
- The flexible inner rod is inserted through the conventional Goldenpig, enabling the user to navigate easily through the female's cervix
- The flexibility of the inner rod, combined with the specially designed safety head of the Goldenpig, reduces the risk of damage to the cervix
- Through the use of the Deep Goldenpig catheter, semen is deposited beyond the cervix into the body of the uterus

Related products

029807 - GoldenPig per 1
029808 - GoldenPig per 25
029806 - GoldenGilt per 1
029805 - GoldenGilt per 25

Key benefits

- Comprehensive quality testing: Each batch undergoes thorough quality tests, including visual and dimensional checks, resistance tests, as well as internal and external toxicity assessments on semen
- Food-grade material: Our catheter's tube material undergoes food-grade testing, ensuring the highest safety standards
- Specific design (rounded shape, texture, diameter):
  - effective against backflow
  - eliminate any risks of penetration into the urinary tract
- Two types of foam:
  - GoldenPig for sow
  - GoldenGilt for gilts (smaller diameter, greater taper, slightly longer foam tip)

Duo-Scan:Go Plus

An ergonomic, all-in-one wireless probe, the Duo-Scan:Go Plus a new standard in livestock scanning. The Duo-Scan:Go was the world's first wireless ultrasound scanner designed for pigs. The scanner was designed from the ground up to meet livestock scanning requirements, creating fast, accurate, easy-to-share images and data.

It unique design and waterproofness allows scan pigs quickly and maintain high standard of the biosecurity.

Key benefits

- Fully sealed, waterproof unit allowing for high standards of biosecurity on farm
- 64 element probe
- Ultrasound image displays on any smart phone or tablet
- Simple and intuitive to use
- Ergonomically designed for optimum probe positioning

Reference

Easi-Scan:Go Lite

Take your swine breeding program to the next level with the Easi-Scan: Go Lite — the tough, wireless scanner built for fast, accurate results. Designed for easy use in any environment, it delivers clear images starting as early as 18 days pregnancy. Lightweight, durable and portable, the Go Lite helps you make faster decisions, improve breeding success, and boost your profits — all with the freedom of a wire-free design.

Key benefits

- Excellent image quality for pregnancy detection from 18 days
- Automatic backfat measurement
- Waterproof for easy cleaning and biosecurity
- Up to 5 hours of battery life
- Wireless — no cables to chew

Probe	Sealed,cruve, 128 elements
Charger	Stand-alone charger, can be used in the car
Battery life	Up to 5 hours
Waterproofness	IP 67, waterproof

Smart counting

Smart counting for farms - Automatic Pig Counter

SmaRt Counting uses a camera to count pigs of all sizes and colors with a guaranteed minimum accuracy of 99.9%.

Animals are counted or discounted depending on the direction in which they move through an alleyway, and humans are not counted.

The count can be started and stopped by pressing a button and the result is available in real time on the hardware or on any device via an intuitive web application.

The Edge Intelligence Platform (EIP), on which the SmaRt Counting software runs, allows for the permanent installation of the hardware directly in the barn or the ability to move it from one barn to another if required.

Key benefits

- 99.9% Counting Accuracy – Reliable and precise tracking of every pig.
- AI-Powered Vision System – Automatic detection for seamless operation.
- Real-Time Counting – Instant data processing for better decision-making.
- Local Data Storage – No internet required for secure and uninterrupted operation.
- Accessible via Mobile App – Monitor and manage data on the go.
- Stationary or Movable Options – Flexibility to suit your farm's needs.
- Works for All Pig Sizes and Colors – Versatile detection for every pig.
- Resistant to Farm Environments – Withstands dust, humidity, and harsh conditions

HERCULES ARM

MOTORIZED DEAD STOCK REMOVAL CART

Hercules' Arm is a self-propelled dead cart that makes removing dead animals from tight spaces easier than any other system.

Only one operator is needed to remove a heavy dead sow from the tightest confined spaces without any risk of harm.

Hercules' Arm's stunning maneuverability, tiltable telescopic boom, and 180° pivoting mast work in unison to optimize Hercules' Arm operation.

It easily turns the tightest corners and navigates around obstacles in any barn.

Key benefits

- Effortless: Pivotable mast allows you to remove sows from individual stalls with absolutely no effort.
- Save time and money: Hercules' Arm turns a 4-man job into a 1-man task, freeing up your time and energy to focus on what matters most.
- Built to last: Thoughtfully engineered and built with premium materials, it's designed to withstand the toughest farm conditions.

αlpha straw

The αlpha straw is IMV Technologies latest technology in swine semen straws. It ensures correct filling of the straw, enhancing the safety of the dose.

Once the straw plug reaches the appropriate level of moisture, the straw plug will fluoresce to indicate that a quality seal has been achieved.

The αlpha straw helps to prevent potential losses during thawing. Its colored plug turns fluorescent when correctly moistened, enabling automatic and / or visual control of the plug's moisture level.

Our training offer

IMV Technologies provides tailored biological trainings, specific ready-to-use standard protocols and global approach to meet your needs in Reproductive Biotechnologies. Emphasizing a hands-on approach with practical exercises, we complement theoretical principles for optimal use of our products, extending our focus to provide personalized guidance. Our data-driven support beyond training helps you in overcoming challenges for your desired outcomes.

Equipment installations: biological and technical expertise

Our team composed of experts, PhD or vets will install your equipments that require biological expertise such as semen analysers (CASA, cytometer) or ultrasound scanners. Two main formats with several trainings per species are available.

Essential (One-day format)

Advanced (2-days+ format)

Service

Since 1963, IMV Technologies has been manufacturing its own equipment and controlling over the entire process, encompassing design, installation, maintenance, and the machine's lifecycle until its retirement.

Equipment installations

Our team of experts will install your new equipment and ensure it is tailored to your needs, maximising efficiency.

Equipment training

After installing your equipment, our service technicians will train your team and ensure they know how to get the most out of the product. Each training is adapted to customer needs.

We offer three types of training:

- Onsite equipment training
- Equipment training for customers at the IMV Technologies corporate offices
- Remote training

After sales support

IMV Technologies' equipment is designed to last. To ensure the equipment always operates with optimal efficiency, we offer both preventive and corrective maintenance as well as maintenance contracts.

In the unlikely event of a breakdown, we offer three types of service:

- Telephone / Remote support
- Onsite repairs
- Product is returned to one of our service centers

Service Contracts

	EXPERT CONTRACT	PREMIUM CONTRACT
Preventive Maintenance Kit	X	X
Preventive Labor	X	X
Preventive technician's travel time	X	X
Hotline Free telephone assistance	X	X
Hotline Call priority	X	X
