Nicolas Vankatwijk

Breeder in Corrèze
130 heads of limousine cattle

« This past winter, I bred 43 cows with AlphaVision. I am extremely reassured with this system as I avoid -I am sure of it- to harm the animal with the tip of the gun on the cervix entry or in the vagina. Before using AlphaVision, this stressed me out the most. AlphaVision, once inside the vagina allows me to locate the cervix with ease and speed and decreases the bleeding that can be associated with holding the cervix via rectal palpation.

Furthermore, before thawing the straw, I control each and every time if there is an infection, with the help of the camera. I pay also attention to the amount of visible cervical mucus because in my point of view, the more mucus I can see, the better is the result of the AI! Sometime, at the beginning of the heat, there is little mucus. So I prefer to wait a few hours then check again. I inseminate when mucus is abundant. The image gives me a lot of useful information impossible to have without AlphaVision. I will never look back! »

Jérôme Beloscar

Dairy farmer
Ayherre 64240
40 adult cows and 30 heifers.

« What is really surprising with AlphaVision, is how easy it is to perform inseminations. What is more, you know if you have inseminated correctly, you know if the cervix is clean. I immediately saw cervixes with abnormal redness on the screen at the time of the AI. »

Giorgia Mambrito

Piemonte region,
Province of Turin, Italy
40 Jerseys and 20 Holsteins.

« I use AlphaVision for detection of metritis because I inseminate jersey heifers with sexed semen and the renewal is important. My uncle uses it today when a cow is difficult to inseminate but when he retires I will use it for all my AI because it is a modern tool which gives a lot of information about the sanitary status of my cows and it is also a real comfort of use. »

Yves Lamarque

64120 Arraute-Charritte
Beef breeder of
Blonde d'Aquitaine cattle
80 cows and 50 heifers.

« The ease with which you can conduct AI procedures is amazing! It's child's play and anyone can do it! When I'm not there, I now have no fear in letting someone do the insemination instead of me. »
